

- ▶ Get the most from DNA: benefit now, benefit later
- ▶ Assess areas for improvement, identify quick wins, and receive a roadmap for continuous improvement.

Considerations:

- Are you getting the most from DNA?
 - Could your staff be more efficient?
 - Are you ready to transition your data to BI Analytics?
 - Can DNA provide data to meet your compliance needs?
 - Improve your member experience!
-

DNA is a complex banking system that is continually updated to meet new industry requirements. Leveraging the power of DNA results in a better member experience, and ensures your banking system is delivering value to your services. Our assessment identifies which DNA operational areas may benefit from process refinement. We provide best practices to complete the work in DNA, improving your operational efficiency.

We also understand the need to address other areas for improvement and leveraging the power of your banking platform (DNA releases, BI Analytics, ECM or compliance). The on-site client workshop includes shadowing your staff to get a real world understanding of your daily processes, and allows you to discuss issues, concerns and future state requirements. Our engagement results in a thorough current environment analysis and a prioritized roadmap for continuous improvement.

Virtual Workshop

Celero consultants review your current DNA environment, note issues and concerns and complete a current environment analysis and identification of areas of improvement.

Client Site Workshop

Celero consultants review your current DNA environment, shadow your staff and discuss issues, concerns and future state requirements. Quick wins can be implemented immediately. You are provided a current environment analysis and a prioritized road map for continuous improvement.
